

Monthly Progress Report

June 2026 · Reporting period: 1 – 30 June 2026 · Prepared 30 June 2026

Executive Summary

June was a strong build month for the Multi-Brand Prompt Generator. The app moved well beyond its original scope (generating AI image prompts) and grew into a broader marketing-content toolkit. The headline addition was a new **Email Content Checker** — a tool that builds on-brand marketing emails, checks them for spam/deliverability issues, and generates matching header imagery. Alongside this we added an **AI concept assistant**, expanded brand support (including the new RocketSpin brand), and hardened the image-generation pipeline. The team shipped **553 changes** across the month touching the prompt engine, email tooling, brand assets, and supporting APIs.

553 Changes shipped	3 Major features	9+ Brands supported	1 New brand (RocketSpin)
------------------------	---------------------	------------------------	-----------------------------

What We Accomplished

1. Email Content Checker (new tool)

- Built a brand-new page that lets the team draft marketing emails and instantly check them before sending.
- Generates a fully on-brand HTML email — correct logo, colours, and header band for each brand.
- Added deliverability and spam scoring so risky wording is flagged before an email goes out.
- Auto-generates a matching email header image for each brand.

2. AI Concept Assistant

- Added an assistant that suggests creative image concepts and can refine them on request.
- Designed for concept diversity so suggestions don't all look the same — backed by a written design spec.

3. Image Generation Hardening

- Reworked the image-generation API for more reliable results and clearer error handling.
- Explored an automatic banner-widening (outpaint) approach for wide 2:1 banners; trialled and then removed it after confirming the mirror-extend method gives better results.

4. Brand & Visual Work

- Onboarded the new **RocketSpin** brand with its own logo, colours, and header styling.
- Standardised brand header bands (diagonal brush-stroke style) so all brands look consistent.
- Refined logo placement across brand headers for better visibility and on-brand presentation.

Notable Changes Log

23 Jun	Branding	Logos moved onto header torn-edge for visibility; contrasting logo cards
23 Jun	RocketSpin	Full ROCKETSPIN logo added to brand header
22 Jun	Branding	Diagonal brush-stroke header band rolled out to match other brands
05 Jun	Image gen	Concept-diversity design for the AI assistant documented
04 Jun	Image gen	Banner outpaint approach trialled, then retired in favour of mirror-extend

Looking Ahead

- Continue refining the Email Content Checker based on real campaign usage and deliverability feedback.
- Expand brand coverage and keep header/logo styling consistent as new brands are added.
- Improve wide-banner image quality using the confirmed mirror-extend approach.
